Resource Conservation and Recovery Strategies for Greenhouse Gas Emission Reductions

Integrating Solid Waste
Management into Kansas City's
Climate Protection Plan

Dennis Murphey
Chief Environmental Officer
Kansas City, MO

Integrating Solid Waste Management into Kansas City's Climate Protection Plan

- In July 2008 the Mayor & City Council unanimously adopted the KCMO Climate Protection Plan
- Based upon our review of other city climate protection plans, Solid Waste Management was a fundamental element in the development of our Plan
- There was a separate Work Group who developed suggested GHG reduction strategies re carbon offsets & waste management

Integrating Solid Waste Management into Kansas City's Climate Protection Plan

Primary Intent Was to Build on Existing SW
Management Program Activities thru KC Recycles:

- Weekly curbside collection of recyclable household materials (voluntary)
- Operation of drop-off recycling centers
- Special event recycling
- Approximate collection – 1,500 – 1,600 tons/month

Integrating Solid Waste Management into Kansas City's Climate Protection Plan

Additional Objective:

- Include solid waste management GHG reduction strategies that provide other benefits, even if we can't quantify their GHG reduction impacts
 - Avoid the need to site & construct additional landfills
 - Create “enterprise” opportunities by recovering materials that were previously discarded
 - Collaborate with regional partners to provide cost savings

SW Management Strategies included in KC's Climate Protection Plan

- Develop a Comprehensive SW Management Plan
- Within 4 Years, Double the Amount of Materials Collected in the City's Curbside Recycling Program
- Expand the City's Internal Recycling Program
- Recycle Materials at Public Events (parades, festivals, concerts, & sporting events)

SW Management Strategies included in KC's Climate Protection Plan

- Compost Food Collected at City Market & Other Facilities
- Place Recycling Containers in Public Right of Way for Use by Pedestrians in High Traffic Areas (we've also added recycling collection to public parks, community centers, & other municipal facilities)
- Recycle at least 75% of C&D Materials from City Construction Projects
- “Flip” the Paradigm of 80:20(landfill:recycling/reuse) to 20:80

SW Management Strategies included in KC's Climate Protection Plan

- Build a Regional “Eco Center” (Resource Recovery & Management Facility) – will go out for bids next month
- Expand Organic Waste Collection & Composting (we are building a 3rd leaf & brush facility that should be open in March 2013)
- Enact an Ordinance to Require Construction & Demolition Projects to have a C&D Management Plan to Achieve an 80% Diversion Rate by 2020

Other SW Management Strategies for GHG Reductions in KC

- Deconstruction vs. Demolition of Dangerous Buildings, with recovery of reusable materials – saves the embedded energy of recovered materials & reduce GHG emissions from C&D landfills
- Energy Generation from Biomass (e.g. woody waste from tree trimming & storm damage) being evaluated with NREL & EPA

SW Management Strategies that Address GHG Reductions from a Materials Consumption Basis

- Reuse of waste concrete & asphalt in road construction projects
- Enactment of a Sustainable Procurement Ordinance that includes preferences for purchase of goods that are durable, recyclable, and are made from recyclable materials
